-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Election/Restrictions*

Applicant's election without traverse of Group I in the reply filed on March 7, 2005 is acknowledged.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 contains a formula including "x", but the values for "x" are not introduced until claim 2. Should this limitation be included in the independent claim? Is it critical?

It is not clear whether the composition is modulated between layers or within a layer itself. For example, page 8 refers to layers where "x" may be constant or vary in the thickness wise direction of the layers. Does the "x" vary, or does the composition (A) vary from layer to layer, or both? Does this mean vary across the layer in a thickness direction, or vary from layer to layer in thickness direction? Please clarify. For the purpose of examination, the claims are interpreted as the composition (A) varying from layer to layer, by either the amount of composition or the element represented by (A).

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Cho et al (US 6,555,269). Cho teaches a material for a battery comprising LiCoO<sub>2</sub>. The “x” is considered 1. As claim 1 does not limit “x”, Cho is considered to read on the claim. The material includes a metal and has a concentration gradient from a surface to the core. This is considered a composition modulation.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
